Managementes Discussion of Fund Performance

Market conditions and your Fund Global equity markets declined in the first half of 2022 amid volatility sparked by Russia•s invasion of Ukraine, rising commodity prices, rampant global inflation and central banks shifting toward tighter monetary policy. Russia•s invasion exacerbated inflationary pressures, disrupting already strained supply chains, and increasing shortages of oil, gas and raw materials, with the price of oil rising sharply.

Inflation headwinds continued into the third quarter of 2022. The US Federal Reserve (the Fed), the European Central Bank and the Bank of England all raised interest rates. In contrast, the People•s Bank of China lowered its policy rate and the Bank of Japan kept rates the same. Emerging market equities, hampered by the strong US dollar, underperformed developed market equities.

Global equity markets posted gains for the fourth quarter of 2022, after better inflation data sparked a rally in October and Novem-December after central banks signaled continued interest rate hikes into 2023 as inflation remained above target levels. International stocks outperformed US stocks in the fourth quarter, led by results in Europe and the UK. Emerging market equities also posted gains for the fourth quarter of 2022, boosted by China, which eased its zero-COVID-19 policy and started to reopen even as COVID-19 infections surged.

Despite the rebound in the fourth quarter of 2022, at the end of the fiscal year ended December 31, 2022, trailing one-year returns for developed market equities and emerging market equities were both in negative territory.

Regardless of the macroeconomic environment, we remain focused on our bottom-up investment approach of identifying attractive companies that fit our earnings, quality and valuation (EQV) process.

Fund holdings in the information technology (IT) sector outperformed those of the Fundes broad market benchmark, the MSCI All Country World ex USA Index, and were the largest contributors to relative performance. Within the sector, not owning Canadian ecom- impact on relative return.

merce company Shopify added to relative results. Canadian IT services companQGI was another notable relative contributor during the fiscal year. Stock selection in the financials sector also contributed to the Fundes relative performance. Brazilian exchange operator B3 and United Overseas Bank in Singapore added to both absolute and relative results within the financials sector. On a geographic basis, the Fundes holdings in China and Germany outperformed those of the broad market benchmark, contributing to relative return. No exposure in Russia and an underweight in Germany added to relative results as well. In a declining equity market environment, the Fundes cash exposure (average 2.7%) contributed to the Fundes relative performance. It is important to note that cash is a residual of our bottom-up investment process and not the result of any top-down tactical asset allocation or risk-management allocation decision.

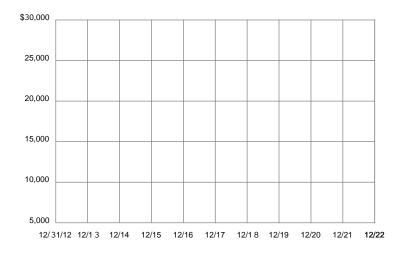

Security selection in the industrials sector detracted from the Fundes relative results. ber. However, investor sentiment worsened in Within industrials, Swedish global engineering group Sandvik and garden products and services companyHusqvarna were key detractors during the fiscal year. The Fundes holdings in the energy sector outperformed those of the broad market benchmark, but an underweight in the sector, the fiscal years best performing sector, hampered relative return. Stock selection in the communication services also detracted from the Fundes relative performance versus the benchmark index. Within the communication services sector, South Korea-based internet conglomerate company NAVER detracted from both absolute and relative results. During the fiscal year, we sold the Fundes position in NAVER because international competitors have been increasing their relevance in the core advertising businesses and the company•s management has been shifting focus towards what we believe is lower margin international businesses. Geographically, the Fundes holdings in Japan, the UK and Sweden underperformed those of the broad market benchmark and were the largest detractors from relative performance. Underweights in the UK and Japan and an overweight in Sweden also had a negative

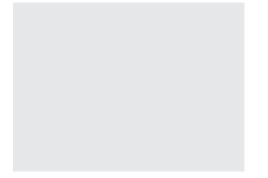

During the fiscal year, we continued to look for opportunities to improve the growth potential and quality of the Fundes portfolio by adding companies based on our EQV characteristics for each company. We added several new holdings, including French industrial gases companyAir Liquide, Hong Kongbased power tools and outdoor power equipment company Techtronic Industries, and Tokyo Electron, a Japanese maker of semiconductor production equipment. We sold several holdings during the fiscal year, including Swiss tobacco company Philip Morris International, global packaging company Amcor and British communication services company WPP.

As always, we remain focused on a bottom-up investment approach of identifying attractive companies that fit our EQsiways, 1/F2 1 T
