# FUND SUMMARY

## INVESTMENT OBJECTIVE

The Fund's investment objective is to seek income and capital appreciation to produce a high total return.

## FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and examples below. The table does not reflect the fees and expenses of variable annuity contracts or variable life insurance policies (together, "Variable Contracts"). If such fees and expenses were reflected, expenses shown would be higher.

--

## **PRINCIPAL INVESTMENT STRATEGIES**

Under normal conditions, the Fund pursues its investment objective by investing in investment grade debt (or fixed income) securities. The Fund may invest up to 20% of its net assets in high-yield debt securities (commonly referred to as “lower-rated” or “junk” bonds). The Fund may invest in debt securities issued by non-U.S. entities but denominated in U.S. dollars, and securities issued by non-U.S. entities and denominated in currencies other than the U.S. dollar. The Fund may invest up to 20% of its net assets in debt securities of non-U.S. issuers that are denominated in non-U.S. currencies.

The Fund generally may invest in the follow

returns, to attempt to hedge some of its investment risk, to manage portfolio duration, as a substitute for holding the underlying asset on which the derivative instrument is based, or for cash management purposes. For example, the Fund may invest in or sell short U.S. Treasury futures, securities index futures, other futures, and/or currency forwards to adjust the Fund's exposure to the direction of interest rates, or for other portfolio management reasons.

The portfolio management team buys and sells securities using a relative value-oriented investment process, meaning the portfolio management team generally seeks more investment exposure to securities believed to be undervalued and less investment exposure to securities believed to be overvalued. The portfolio management team combines top-down and bottom-up analysis to construct its portfolio, using a blend of quantitative and fundamental research. As part of its top-down analysis, the portfolio management team evaluates global economic conditions, including monetary, fiscal, and regulatory policy, as well as the political and geopolitical environment, in order to identify and assess opportunities and risks

or intervention, market disruptions caused by trade disputes or other factors, political developments, and other factors. Prices of equity securities tend to rise and fall more dramatically than those of debt securities.

- **Fixed Income Securities Risk:** The Fund is subject to the general risks and considerations associated with investing in debt securities, including the risk that issuers will fail to make timely payments of principal or interest or default altogether. Lower-rated securities in which the Fund may invest may be more volatile and may decline more in price in response to negative issuer developments or general economic news than higher rated securities. In addition, as interest rates rise, the Fund's investments typically will lose value.
- **High Yield Securities Risk:** High yield securities (commonly referred to as "junk" bonds) typically pay a higher yield than investment grade securities, but may have greater price fluctuations and have a higher risk of default than investment grade securities. The market for high yield securities may be less liquid due to such factors as interest rate sensitivity, negative perceptions of the junk bond markets generally, and less secondary market liquidity. This may make such securities more difficult to sell at an acceptable price, especially during periods of financial distress, increased market volatility, or significant market decline.
- **Credit Risk:** Debt securities are subject to the risk that the issuer or guarantor of a security may not make interest and principal payments as they become due or may default altogether. In addition, if the market perceives a deterioration in the creditworthiness of an issuer, the value and liquidity of securities issued by that issuer may decline. To the extent that the Fund holds below investment grade securities, these risks may be heightened. Insured debt securities have the credit risk of the insurer in addition to the credit risk of the underlying investme-.0062 Tc.0ly le erg 43.6(e e)-su7.3(19-4.7(1)f4-10.2(u)7.3 TD.0023 T391 332

instruments, fluctuations in the market price of such investments may not affect interest income derived from those instruments, but may nonetheless affect the Fund's net asset value ("NAV"), especially if the instrument has a longer maturity. Substantial increases in interest rates may cause an increase in issuer defaults, as issuers may lack resources to meet higher debt service requirements. Recently, there have been signs of inflationary price movements. As such, fixed income securities markets may experience heightened levels of interest rate volatility and liquidity risk. The United States is currently experiencing a rising interest rate environment, which may increase the Fund's exposure to risks associated with rising interest rates.

- **Liquidity/Redemption Risk:** The Fund may lose money when selling securities at inopportune times to fulfill shareholder redemption requests. The risk of loss may increase depending on the size and frequency of redemption requests, whether the redemption requests occur in times of overall market turmoil or declining prices, and whether the securities the Fund intends to sell have decreased in value or are illiquid. The Fund may be less able to sell illiquid securities at its desired time or price. It may be more difficult for the Fund to value its investments in illiquid securities than more liquid securities.
- **Government Securities Risk:** The Fund invests in securities issued or guaranteed by the U.S. Government or its agencies and instrumentalities (such as the Government National Mortgage Association ("Ginnie Mae"), the Federal National Mortgage Association ("Fannie Mae"), or the Federal Home Loan Mortgage Corporation ("Freddie Mac")). Unlike Ginnie Mae securities, securities issued or guaranteed by U.S. Government-related organizations, such as Fannie Mae and Freddie Mac, are not backed by the full faith and credit of the U.S. Government and no assurance can be given that the U.S. Government would provide financial support.
- **Mortgage-Related and Other Asset-Backed Securities Risk:** Mortgage-related securities, including commercial mortgage-backed securities ("CMBS") and other privately issued mortgage-related securities, and other asset-backed securities may be particularly sensitive to changes in prevailing interest rates and economic conditions, including delinquencies and defaults.

investments may be vulnerable to changes in expectations of inflation or interest rates and there is no guarantee that the Fund's use of these instruments will be successful.

- **Foreign and Emerging Market Company Risk:** Investments in foreign companies and in U.S. companies with economic ties to foreign markets generally involve special risks that can increase the likelihood that the Fund will lose money. For example, as compared with companies organized and operated in the U.S., these companies may be more vulnerable to economic, political, and social instability and subject to less government supervision, lack of transparency, inadequate regulatory and accounting standards, and foreign taxes. In addition, the securities of foreign companies also may be subject to inadequate exchange control regulations, the imposition of economic sanctions or other government restrictions, higher transaction and other costs, reduced liquidity, and delays in settlement to the extent they are traded on non-U.S. exchanges or markets. Foreign company securities also include American Depositary Receipts ("ADRs"). ADRs may be less liquid than the underlying shares in their primary trading market. Foreign securities also may subject the Fund's investments to changes in currency exchange rates. Emerging market securities generally are more volatile than other foreign securities, and are subject to greater liquidity, regulatory, and political risks. Investments in emerging markets may be considered speculative and generally are riskier than investments in more developed markets because such markets tend to develop unevenly and may never fully develop. Emerging markets are more likely to experience hyperinflation and currency devaluations. Securities of emerging market companies may have far lower trading volumes and less liquidity than securities of issuers in developed markets. Companies with economic ties to emerging markets may be susceptible to the same risks as companies organized in emerging markets.
- **Foreign Currency Risk:** Investments in securities denominated in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedged positions, that the U.S. dollar will decline in value relative to the currency being hedged. Foreign currency exchange rates may fluctuate significantly over short periods of time.
- **Loan Risk:** Investments in floating or adjustable rate loans are subject to increased credit and liquidity risks. Loan prices also may be adversely affected by supply-demand imbalances caused by conditions in the loan market or related markets. Below investment grade loans, like high-yield debt securities, or junk bonds, usually are more credit sensitive than interest rate sensitive, although the value of these instruments may be affected by interest rate swings in the overall fixed income market. Loans may be subject to structural subordination and may be subordinated to other obligations of the borrower or its subsidiaries.

- **Collateralized Loan Obligations and Other Collateralized Obligations Risk:**

An investment in a collateralized loan obligation (“CLO”) can be viewed as investing in (or through) another investment adviser and is subject to the layering of fees associated with such an investment. The risks of an investment in a CLO depend largely on the type of the collateral held in the CLO portfolio and the tranche of securities in which the Fund invests. The risks of investing in a CLO can be generally summarized as a combination of economic risks of the underlying loans combined with the risks associated with the CLO structure governing the priority of payments, and include interest rate risk, credit risk, liquidity risk, prepayment risk, and the risk of default of the underlying asset, among others.

- **LIBOR Risk:** Certain instruments in which the Fund may invest rely in some fashion upon the London Interbank Offered Rate (“LIBOR”). On March 5, 2021, the United Kingdom Financial Conduct Authority (FCA) and LIBOR’s administrator, ICE Benchmark Administration (IBA), announced that most LIBOR settings will no longer be published after the end of 2021 and the remaining U.S. dollar LIBOR settings will no longer be published after June 30, 2023. Abandonment of or modifications to LIBOR could have adverse impacts on newly issued financial instruments and existing financial instruments which reference LIBOR and lead to significant short-term and long-term uncertainty and market instability.

- **Derivatives Risk:** The risks associated with derivatives may be different from and greater than the risks associated with directly investing in securities and other investments. Derivatives may increase the Fund’s volatility and reduce its returns. The risks associated with derivatives include, among other things, the following:

- The risk that the value of a derivative may not correlate with the value of the underlying asset, rate, or index in the manner anticipated by the portfolio management team and may be more sensitive to changes in economic or market conditions than anticipated.
- Derivatives may be difficult to value, especially under stressed or unforeseen market conditions.
- The risk that the counterparty may fail to fulfill its contractual obligations under the derivative contract. Central clearing of derivatives is intended to decrease counterparty risk but does not eliminate it.
- The risk that there will not be a liquid secondary trading market for the derivative, or that the Fund will otherwise be unable to sell or otherwise close a derivatives position when desired, exposing the Fund to additional losses.
- Because derivatives generally involve a small initial investment relative to the risk assumed (known as leverage), derivatives can magnify the Fund’s losses and increase its volatility.

- The Fund's use of derivatives may affect the amount, timing, and character of distributions, and may cause the Fund to realize more short-term capital gain and ordinary income than if the Fund did not use derivatives.

Derivatives may not perform as expected and the Fund may not realize the intended benefits. Whether the Fund's use of derivatives is successful will depend on, among other things, the portfolio managers' ability to correctly

**Portfolio Managers.**

# **MORE INFORMATION ABOUT THE FUND**

## **INVESTMENT OBJECTIVE**

The Fund's investment objective is to seek income and capital appreciation to produce a high total return.

## **PRINCIPAL INVESTMENT STRATEGIES**

Under normal conditions, the Fund pursues its investment objective by investing in investment grade debt (or fixed income) securities. Investment grade debt securities are securities that are rated within the four highest grades assigned by an independent rating agency such as Moody's Investors Service, Inc. (Aaa, Aa, A,

The Fund may invest up to 10% of its net assets in floating or adjustable rate loans, including bridge loans, novations, assignments, and participations. The interest rates on floating or adjustable rate loans periodically are adjusted to a generally recognized base rate such as the LIBOR or the prime rate as set by the Federal Reserve. The Fund's investments in loans may include senior loans, second lien, or other subordinated loans.

The Fund seeks to manage interest rate risk through 2.1(m)13d.3(h)6.4(e in)6.s(t)-4.3(e)-6.9

contract to buy or sell a specified security or other financial instrument at a specific future date and price on an exchange or the OTC market. An option on a futures contract gives the purchaser the right to buy or sell a futures contract in exchange for the payment of a premium. The Fund may enter into such contracts as a substitute for taking a position in any underlying asset or to increase returns.

- **Foreign Currency Forward Contracts and Options:**

## **PRINCIPAL RISKS**

As with any investment in a mutual fund, investing in the Fund involves risk, including the risk that you may receive little or no return on your investment. When you redeem your shares, they may be worth more or less than what you paid for them, which means that you may lose a portion or all of the money you invested in the Fund. Before you invest in the Fund, you should carefully evaluate the risks in light of your investment goals. An investment in the Fund held for longer periods over full market cycles typically provides more favorable results.

business or economic conditions, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and interest. In addition, if the market perceives a deterioration in the creditworthiness of an issuer, the value and liquidity of securities issued by that issuer may decline. Credit risk varies based on the economic and fiscal conditions of each issuer. As noted above, to the extent the Fund holds below investment grade securities, these risks may be heightened. The credit quality of the Fund's portfolio securities or instruments may meet the Fund's credit quality requirements at the time of purchase but then deteriorate thereafter, and such a deterioration can occur rapidly. In certain instances, the downgrading or default of a single holding or guarantor of the Fund's holding may impair the Fund's liquidity and have the potential to cause significant NAV deterioration. Insurance or other credit enhancements supporting the Fund's investment may be provided by either U.S. or foreign entities. These securities have the credit risk of the entity providing the credit support in addition to the credit risk of the underlying investment that is being enhanced. Credit support provided by foreign entities may be less certain because of the possibility of adverse foreign economic, political or legal developments that may affect the ability of the entity to meet its obligations. A change in the credit rating or the market's perception of the creditworthiness of any of the bond insurers that insure securities in the Fund's portfolio may affect the value of the securities they insure, the Fund's share prices, and Fund performance. A downgrading of an insurer's credit rating or a default by the insurer could reduce the credit rating of an insured bond and, therefore, its value. The Fund also may be adversely affected by the inability of an insurer to meet its insurance obligations.

- **Interest Rate Risk:** As interest rates rise, prices of bonds (including tax-exempt bonds) generally fall, typically causing the Fund's investments to lose value. Additionally, rising interest rates or lack of market participants may lead to decreased liquidity in fixed income market

if the instrument has a longer maturity. Substantial increases in interest rates

mortgage-related and other asset-backed securities generally will decline; however, when interest rates are declining, the value of mortgage-related securities with prepayment features may not increase as much as other fixed income securities. Alternatively, rising interest rates may cause prepayments to occur at a slower-than-expected rate, extending the duration of a security and typically reducing its value. Early repayment of principal on some mortgage-related securities may deprive the Fund of income payments above current market rates. The payment rate thus will affect the price and volatility of a mortgage-related security. The value of some mortgage-related and other asset-backed securities may fluctuate in response to the market's perception of the creditworthiness of the issuers. Additionally, although mortgages and mortgage-related securities generally are supported by some form of government or private guarantee and/or insurance, there is no assurance that private guarantors or insurers will meet their obligations.

- **Inflation/Deflation Risk:** Inflation risk is the risk that the value of assets or income from investments will be worth less in the future. Inflation rates may

currency devaluations. Securities of emerging market companies may have far lower trading volumes, tend to be less liquid, subject to greater price volatility, have a smaller market capitalization, have less government regulation and may not be subject to as extensive and frequent accounting, financial and other reporting requirements as securities issued in more developed countries. Further, investing in the securities of issuers with economic exposure to emerging countries may present a greater risk of loss resulting from problems in security registration and custody or substantial economic or political disruptions. The Fund may invest in securities of companies whose economic fortunes are linked to emerging markets but which principally are traded on a non-emerging market exchange. Such investments do not meet the Fund's definition of an emerging market security. To the extent the Fund invests in this manner, the percentage of the Fund's portfolio that is exposed to emerging market risks may be greater than the percentage of the Fund's assets that the Fund defines as representing emerging market securities.

- **Foreign Currency Risk:** Investments in securities that are denominated or receiving revenues in foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedged positions, that the U.S. dollar will decline in value relative to the currency being hedged. Foreign currency exchange rates may fluctuate significantly over short periods of time. A decline in the value of foreign currencies relative to the U.S. dollar will reduce the value of securities that are denominated in those currencies. The Fund may engage in foreign currency hedging transactions to attempt to protect the Fund from adverse currency movements. Such transactions include the risk that Lord Abbett will not accurately predict currency movements. As a result, the Fund may experience significant losses or see its return reduced. Also, it may be difficult or

Compared to securities and to certain other types of financial assets, purchases and sales of loans take longer to settle. This extended settlement process can (i) increase the counterparty risk borne by the Fund; (ii) leave the Fund unable to timely exercise voting and other rights as a holder of loans it has agreed to purchase; (iii) delay the Fund from realizing the proceeds of a sale of a loan; (iv) inhibit the Fund's ability to re-sell a loan that it has agreed to purchase if conditions change (leaving the Fund more exposed to price fluctuations); (v) prevent the Fund from timely collecting principal and interest payments; and (vi) expose the Fund to adverse tax or regulatory consequences. To the extent the extended loan settlement process gives rise to short-term liquidity needs, such as the need to satisfy redemption requests, the Fund may hold cash, sell investments, or temporarily borrow from banks or other lenders.

In certain circumstances, loans may not be considered securities, and in the event of fraud or misrepresentation by a borrower or an arranger, the Fund will not have the protection of the anti-fraud provisions of the federal securities laws, as would be the case for bonds or stocks. Instead, in such cases, the Fund generally will rely on the contractual provisions in the loan agreement itself, and common-law fraud protections under applicable state law.

• **Collateralized Loan Obligations and Other Collateralized Obligations Risk:**

An investment in a CLO can be viewed as investing in (or through) another investment adviser and is subject to the layering of fees associated with such an investment. The cash flows from a CLO are divided into two or more classes called "tranches," each having a different risk-reward structure in terms of the right (or priority) to receive interest payments from the CLO. The risks of an investment in a CLO depend largely on the type of the collateral held in the CLO portfolio and the tranche of securities in which the Fund invests. The risks of investing in a CLO can be generally summarized as a combination of economic risks of the underlying loans combined with the risks associated with the CLO structure governing the priority of payments, and include interest rate risk, credit risk, liquidity risk, prepayment risk, and the risk of default of the underlying asset, among others.

- **LIBOR Risk:** Certain instruments in which the Fund may invest rely in some fashion upon LIBOR. LIBOR is an average interest rate, determined by the IBA, that banks charge one another for the use of short-term money. The administrator of LIBOR ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of the remaining U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies. The transition away from LIBOR may lead to increased volatility and illiquidity in markets that rely on LIBOR and may adversely affect the Fund's performance. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Fund or

reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses to the Fund. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.

- **Derivatives Risk:** The risks associated with derivatives may be different from and greater than the risks associated with directly investing in securities and other investments. Derivatives may increase the Fund's volatility and reduce its returns. The risks associated with derivatives include, among other things, the following:
  - The risk that the value of a derivative may not correlate with the value of the

While Lord Abbett has established internal risk management security protocols designed to identify, protect against, detect, respond to and recover from cyber security incidents, there are inherent limitations in such protocols including the possibility that certain threats and vulnerabilities have not been identified or made public due to the evolving nature of cyber security threats. Furthermore, Lord Abbett cannot control the cyber security systems of third party service providers or issuers. There currently is no insurance policy available to cover all of the potential risks associated with cyber incidents. Unless specifically agreed by Lord Abbett separately or required by law, Lord Abbett is not a guarantor against, or obligor for, any damages resulting from a cyber security-related

enable it to reestablish normal business operations in a timely manner in the event of an adverse incident, there are inherent limitations in such programs (including the possibility that contingencies have not been anticipated and procedures do not work as intended) and, under some circumstances, Lord Abbett, its affiliates, and any vendors used by Lord Abbett, its affiliates, or the Fund could be prevented or hindered from providing services to the Fund for extended periods of time. These circumstances may include, without limitation, acts of God, acts of governments, any act of declared or undeclared war or of a public enemy (including acts of terrorism), power shortages or failures, utility or

further negotiation and agreement. Brexit resulted in volatility in European and global markets and could have negative long-term impacts on financial markets in the UK and throughout Europe. There is still considerable uncertainty relating

In March 2023, the shut-down of certain financial institutions raised economic concerns over disruption in the U.S. banking system. There can be no certainty that the actions taken by the U.S. government to strengthen public confidence in the U.S. banking system will be effective in mitigating the effects of financial institution failures on the economy and restoring public confidence in the U.S. banking system.

The transmission of COVID-19 and efforts to contain its spread resulted in, and will continue to result in, for the foreseeable future, among other things, border closings and other significant travel restrictions and disruptions, significant disruptions to business operations, supply chains and customer activity, lower consumer demand for goods and services, event cancellations and restrictions, service cancellations, reductions and other changes, significant challenges in healthcare service preparation and delivery, and prolonged quarantines, as well as general concern and uncertainty. The impact of the COVID-19 outbreak has, and could again, negatively affect the global economy, the economies of individual countries, and the financial performance of individual issuers, sectors, industries, asset classes, and markets in significant and unforeseen ways. The COVID-19 pandemic and its effects may last for an extended period of time. New variants and low rates of vaccination in certain areas of the world have hampered recovery efforts and continue to create further uncertainty. Even as restrictions have been lifted in certain jurisdictions, they have been reimposed in others, and this pattern may continue for the foreseeable future as certain jurisdictions experience resurgences of COVID-19. Although the long-term economic fallout of COVID-19 is difficult to predict, it has contributed to, and is likely to continue to contribute to, market volatility, inflation and systemic economic weakness. The foregoing could disrupt the operations of the Fund and its service providers, adversely affect the value and liquidity of the Fund's investments, and negatively impact the Fund's performance and your investment in the Fund. The COVID-19 pandemic and efforts to contain its spread may also exacerbate other risks that apply to the Fund.

- **Valuation Risk:** The valuation of the Fund's investments involves subjective judgment. There can be no assurance that the Fund will value its investments in a manner that accurately reflects their current market values or that the Fund will be able to sell any investment at a price equal to the valuation ascribed to that investment for purposes of calculating the Fund's NAV. Incorrect valuations of the Fund's portfolio holdings could result in the Fund's shareholder transactions being effected at an NAV that does not accurately reflect the underlying value of the Fund's portfolio, resulting in the dilution of shareholder interests.

## **DISCLOSURE OF PORTFOLIO HOLDINGS**

A description of the Fund's policies and procedures regarding the disclosure of the Fund's portfolio holdings is available in the SAI. Further information is available at [www.lordabbett.com](http://www.lordabbett.com).

## **MANAGEMENT AND ORGANIZATION OF THE FUND**

**Board of Directors.** The Board oversees the management of the business and affairs of the Fund. The Board appoints officers who are responsible for the day-to-day operations of the Fund and who execute policies authorized by the Board. At least 75 percent of the Board members are not “interested persons” (as defined in the 1940 Act) of the Fund.

**Investment Adviser.** The Fund’s investment adviser is Lord Abbett, which is located at 90 Hudson Street, Jersey City, NJ 07302-3973. Founded in 1929, Lord Abbett manages one of the nation’s oldest mutual fund complexes and manages approximately \$196.0 billion in assets across a full range of mutual funds, institutional accounts, and separately managed accounts, including \$1.0 billion for which Lord Abbett provides investment models to managed account sponsors as of March 31, 2023.

**Portfolio Managers.**

rate of 0.04% of the Fund's average daily net assets. The Fund pays all of its expenses not expressly assumed by Lord Abbett.

Each year the Board considers whether to

nature and quality of any shareholder services provided by the financial intermediary; the quality and depth of the financial intermediary's existing business relationships with Lord Abbett; the expected potential to expand such relationships; and the financial intermediary's anticipated growth prospects. Not all financial intermediaries receive revenue sharing payments and the amount of revenue sharing payments may vary for different financial intermediaries. Lord Abbett may choose not to make payments in relation to certain of the Lord Abbett Funds or certain classes of shares of any particular Fund.

In some circumstances, these payments may create an incentive for a broker-dealer or its investment professionals to recommend or sell Fund shares to you. Lord Abbett may benefit from these payments to the extent the broker-dealers sell more Fund shares or retain more Fund shares in their clients' accounts because Lord Abbett receives greater management and other fees as Fund assets increase. For more specific information about these payments, including revenue sharing arrangements, made to your broker-dealer or other financial intermediary and the conflicts of interest that may arise from such arrangements, please contact your investment professional. In addition, please see the SAI for more information regarding Lord Abbett's revenue sharing arrangements with financial intermediaries.

## **PURCHASES AND REDEMPTIONS**

The Fund offers in this prospectus, at NAV, one class of shares named Variable Contract Class, which is referred to in this prospectus as Class VC. Shares of the Fund are not offered directly to the public. Rather, shares of the Fund currently are offered only to separate accounts of certain insurance companies. These insurance companies sell Variable Contracts that generate premiums, some of which will be invested in the Fund. Redemptions will be effected by the separate accounts to meet obligations under the Variable Contracts. Variable Contract owners do not deal directly with the Fund with respect to the purchase or redemption of Fund shares.

You should note that your purchase, exchange, and redemption requests may be subject to review and verification on an ongoing basis.

We reserve the right to modify, restrict, or reject any purchase order or exchange request if the Fund or Lord Abbett Distributor determines that it is in the best interest of the Fund and its shareholders. All purchase orders are subject to our acceptance.

**Liquidity Management.** The Fund has implemented measures designed to enable it to pay redemption proceeds in a timely fashion while maintaining adequate liquidity. The Fund's portfolio management team continually monitors portfolio liquidity and adjusts the Fund's cash level based on portfolio composition, redemption rates, market conditions, and other relevant criteria. Under normal circumstances, the Fund's portfolio management team may meet redemption requests and manage liquidity by selling portfolio securities. Under certain circumstances, including stressed market conditions, the Fund's portfolio management team may meet

between the most recently quoted bid and asked prices. Unlisted fixed income securities (other than those with remaining maturities of 60 days or less) are valued at prices supplied by third-party pricing services, which prices are broker/dealer-supplied valuations or evaluated or “matrix” prices based on electronic data processing techniques. Such valuations are based on the mean between the bid and asked prices, when available, and are based on the bid price when no asked price is available. Unlisted fixed income securities (other than senior loans) having remaining maturities of 60 days or less are valued at their amortized cost. The principal markets for non-U.S. securities and U.S. fixed income securities also generally close prior to the close of the NYSE. Consequently, values of non-U.S. investments and U.S. fixed income securities will be determined as of the earlier closing of such exchanges and markets unless the Fund prices such a security at its fair value. This may allow significant events, including broad market moves that occur in the interim, to affect the values of non-U.S. securities and U.S. fixed income securities held by the Fund. These timing differences may allow a shareholder to exploit differences in the Fund’s share prices that are based on closing prices of non-U.S. securities and U.S. fixed-income securities that are determined before the Fund calculates its NAV per share. For more information, please see the section “Excessive Trading and Market Timing” below.

Securities for which prices or market quotations are not readily available, do not accurately reflect fair value in Lord Abbett’s opinion, or have been materially affected by events occurring after the close of the market on which the security is principally traded but before 4:00 p.m. Eastern time are valued by Lord Abbett, as the Fund’s “valuation designee”, subject to oversight by the Board, and in accordance with the Fund’s valuation procedures, pursuant to Rule 2a-5 under the 1940 Act. These circumstances may arise, for instance, when trading in a security is suspended, the market on which a security is traded closes early, or demand for a security (as reflected by its trading volume) is insufficient and thus calls into

Certain securities that are traded primarily on foreign exchanges may trade on weekends or days when the NAV is not calculated. As a result, the value of securities may change on days when shareholders are not able to purchase or sell Fund shares.

**Excessive Trading and Market Timing.** The Fund is not designed for short-term investors and is not intended to serve as a vehicle for frequent trading in response to short-term swings in the market. Excessive, short-term or market timing trading practices (“frequent trading”) may disrupt management of the Fund, raise its expenses, and harm long-term shareholders in a variety of ways. For example, volatility resulting from frequent trading may cause the Fund difficulty in implementing long-term investment strategies because it cannot anticipate the amount of cash it will have to invest. The Fund may find it necessary to sell portfolio securities at disadvantageous times to raise cash to meet the redemption demands resulting from such frequent trading. Each of these, in turn, could increase tax, administrative, and other costs, and reduce the Fund’s investment return.

To the extent the Fund invests in foreign securities, the Fund may be particularly susceptible to frequent trading because many foreign markets close hours before the Fund values its portfolio holdings. This may allow significant events, including broad market moves that occur in the interim, to affect the values of foreign securities held by the Fund. The time zone differences among foreign markets may allow a shareholder to exploit differences in the Fund’s share prices that are based on closing prices of foreign securities determined before the Fund calculates its NAV per share (known as “time zone arbitrage”). To the extent the Fund invests in securities that are thinly traded or relatively illiquid, the Fund also may be particularly susceptible to frequent trading because the current market price for such securities may not accurately reflect current market values. A shareholder may

financial intermediaries that place orders on behalf of their clients, which procedures are described below. The Fund may modify its frequent trading policy and monitoring procedures from time to time without notice as and when deemed appropriate to enhance protection of the Fund and its shareholders.

Financial intermediaries include broker-dealers, registered investment advisers, banks, trust companies, certified financial planners, third-party administrators, recordkeepers, trustees, custodians, financial consultants and insurance companies.

**Frequent Trading Policy and Procedures.** We have procedures in place designed to enable us to monitor the purchase, sale and exchange activity in Fund shares by investors and financial intermediaries that place orders on behalf of their clients in order to attempt to identify activity that is potentially harmful to the Fund. While we attempt to apply the policy and procedures uniformly to detect frequent trading practices, there can be no assurance that we will succeed in identifying all such practices or that some investors will not employ tactics that evade our detection.

Lord Abbett Distributor may review the frequent trading policies and procedures that

bank drafts, traveler's checks, and third party or double-endorsed checks, among others.

**How to Protect Your Account from State Seizure.** Under state law, mutual fund accounts can be considered "abandoned property." The Fund may be required by state law to forfeit or pay abandoned property to the state government if you have not accessed your account for a period specified by the state of your domicile. Depending on the state, in most cases, a mutual fund account may be considered abandoned and forfeited to the state if the account owner has not initiated any activity in the account or contacted the fund company holding the account for as few as three or as many as five years. Because the Fund is legally required to send the state the assets of accounts that are considered "abandoned," the Fund will not be liable to shareholders for good faith compliance with these state laws. If you invest in the Fund through a financial intermediary, we encourage you to contact the financial intermediary regarding applicable state abandoned property laws.

If you hold your account directly with the Fund (rather than through an intermediary), we strongly encourage you to contact us at least once each year. Below are ways in which you can assist us in safeguarding your Fund investments:

- Log into your account at [www.lordabbett.com](http://www.lordabbett.com). Please note that, by contrast, simply visiting our public website will not constitute contact with us under state abandoned property rules; instead, an account login is required.
- Call our 24-hour automated service line at 888-522-2388 and use your Personal Identification Number (PIN). If you have never used this system, you will need your account number to establish a PIN.
- Call one of our customer service representatives at 888-522-2388 Monday through Friday from 8:00 am to 5:30 pm Eastern time. To establish contact with us under certain states' abandoned property rules, you will need to provide your name, account number, and other identifying information.
- Promptly notify us if your name, address, or other account information changes.
- Promptly vote on proxy proposals related to any Lord Abbett Fund you hold.
- Promptly take action on letters you receive in the mail from the Fund concerning account inactivity, outstanding dividend and redemption checks, and/or abandoned property and follow the directions in these letters.

**Additional Information.** This prospectus and the SAI do not purport to create any contractual obligations between the Fund and shareholders. Further, shareholders are not intended third-party beneficiaries of any contracts entered into by (or on behalf of) the Fund, including contracts with Lord Abbett or other parties who provide services to the Fund.

## **CONFLICTS OF INTEREST**

As discussed above, shares of the Fund offered in this prospectus currently are available only to separate accounts of certain insurance companies. Although the Fund currently does not anticipate any disadvantages to Variable Contract owners because it offers its shares to such entities, there is a possibility that a material conflict may arise. The Board of Directors intends to monitor events in order to identify any disadvantages or material irreconcilable conflicts and to determine what action, if any, should be taken in response. If a material disadvantage or conflict arises, the Board of Directors may require one or more insurance company separate accounts to withdraw its investments in the Fund. If this occurs, the Fund may be forced to sell portfolio securities at disadvantageous prices.

## **DISTRIBUTIONS AND TAXES**

The Fund expects to pay its shareholders dividends from its net investment income at least semiannually and to distribute any net capital gains annually. Holders of Variable Contracts may qualify for favorable tax treatment with respect to such contracts. For additional information about the federal income tax treatment of Fund distributions to the insurance company separate accounts that hold shares in the Fund, please refer to the prospectus provided by the insurance company for your Variable Contract.

The Fund has elected to be treated and intends to qualify each year as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"). As such, the Fund must satisfy federal tax requirements relating to the sources of its income, diversification of its assets and distribution of its income to shareholders. As long as the Fund meets such requirements, it will not be subject to U.S. federal income tax on any net investment income and net capital gains that it timely distributes.

In order for holders of Variable Contracts to receive the favorable tax treatment available with respect to Variable Contracts, certain diversification and investor control requirements must be met. The Fund intends to comply with these diversification and investor control requirements. To satisfy the diversification requirements contained in Section 817(h) of the Code and Treasury regulations thereunder, the Fund generally either (1) will not be permitted to invest more than 55% of the value of its total assets in the securities of a single investment; more than 70% of the value of its total assets in the securities of any two investments; more than 80% of the value of its total assets in the securities of any three investments; or more than 90% of the value of its total assets in the securities of any four investments or (2) will be required to meet an alternate safe harbor diversification test. If the Fund were to fail to satisfy one of these diversification requirements on the last day of any quarter of a calendar year or if Variable Contract owners were determined to have an impermissible level of "investor control" over the investment options underlying Variable Contracts, owners of Variable Contracts that are invested in shares in the Fund could become subject to current federal taxation at ordinary income rates with respect to any income accrued under the Variable

Contract for the current and all prior taxable years. For more specific information on the diversification requirements applicable to Variable Contracts, see the SAI.

Because of the unique tax status of Variable Contracts, you should consult your tax adviser regarding treatment under the federal, state, and local tax rules that apply to you.

## **SERVICE ARRANGEMENTS**

Certain insurance companies will be compensated by the Fund up to 0.25% of the average daily NAV of the Fund's Class VC Shares held in the insurance company's separate account to service and maintain Variable Contract owners' accounts. The services provided may include: providing information periodically to Variable Contract owners; showing the number of shares of the Fund held through the Variable Contract; responding to Variable Contract owners' inquiries relating to the services performed by the insurance company; forwarding shareholder communications from the Fund, including proxy materials, shareholder reports and annual and semiannual financial statements, as well as dividend, distribution and tax notices to Variable Contract owners, if required by law; and such other similar services as the Fund may reasonably request, from time to time, to the extent the insurance company is permitted to provide such services under federal and state statutes, rules and regulations.

The Fund also may compensate certain insurance companies, third-party administrators and other entities for providing recordkeeping, sub-transfer agency and other administrative services to the Fund.

# FINANCIAL INFORMATION

## FINANCIAL HIGHLIGHTS

These tables describe the Fund's performance for the fiscal years indicated. "Total Return" shows how much your investment in the Fund would have increased or decreased during each year, assuming you had reinvested all dividends and distributions. "Total Return" does not reflect the sales charges or other expenses of
